

# Analytics

## How can SAP® solutions enable you to change the game?

SAP BusinessObjects™ solutions provide a comprehensive set of modern analytics capabilities, on premise and in the cloud, that work together to analyze data wherever it resides for all enterprises and across every industry. These solutions help users better understand their business and transform the enterprise in the digital age.

## What do SAP solutions help customers do?

### Business intelligence

Maximize business performance with high-impact dashboards and business intelligence applications.

### Enterprise performance management

Improve decision making and results by aligning strategy and execution.

### Governance, risk, and compliance

Empower businesses to confidently navigate risk and manage controls and compliance.

### Predictive analytics

Anticipate and drive better business outcomes with predictive analytics.

## What are the benefits?

With analytics solutions from SAP, all users within an organization can create business value through:

- Better support for the analytics needs (data discovery, visualization, planning, predictive, and governance) of every user
- Improved delivery on all devices, in the cloud, and on premise, giving users choices as to how they can work and deploy analytics
- Unparalleled performance, scale, and integration into SAP software and other systems of record for live “insight to action”

## Why SAP?

SAP BusinessObjects solutions provide a foundation to deliver modern analytics to everyone in the enterprise, and SAP is the trusted partner help to transform all businesses to excel in the new digital economy.
